| reziichsan.github.io/Portfolio | Bekasi, Indonesia

SUMMARY

Informatics graduate from Telkom University with strong experience in Software Engineering, IT Operations, and AI/Data solutions. Proven track record in scaling live digital platforms for 1,000+ CCU, deploying machine learning models with 88% accuracy, and building web applications using Django. Proactive problem solver open to Software Engineering and IT Specialist roles.

WORK EXPERIENCE

Web Developer Intern | Nutrifood Indonesia **Juli 2022 - September 2022**

- Developed and implemented the Digital Meeting module for the Enterprise Social Media Monitoring System using Django, enabling seamless management and local persistence of corporate virtual meeting records.
 - Built complete CRUD (Create, Read, Update, Delete) workflows and integrated a dynamic keyword search feature to streamline meeting data retrieval for system administrators.
 - Participated in end-to-end system testing, feature refinements, and Agile project tracking via Trello during an 8-week full-time remote internship.
-

PROJECTS

Eternia Forest Roblox Game Project | Personal Project : [View Project](#).

- Collaborated with a small team to develop and publish a multiplayer Roblox game project.
- Contributed to environment design, gameplay development, and troubleshooting during the development process.
- Managed live server maintenance, bug fixing, and optimization to ensure uptime for over 1,000 concurrent users.
- Successfully reached over 300K+ visits and previously achieved 1,000 concurrent active players at peak activity.
- Gained hands-on experience in teamwork, problem-solving, and live game project management

Multilingual Hoax Detection System | Final Thesis Project : [View Project](#)

- Developed an automated hoax detection system using IndoBERT and Multilingual Transformers (mBERT and XLM-R) models over a 5-language dataset (English, Hindi, Indonesian, Swahili, and Vietnamese).
- Designed and executed 2 experimental scenarios: evaluating combined multilingual datasets against customized subset datasets filtered by language origin.
- Conducted data pre-processing pipelines (lowercasing, tokenization, URL/number removal, and stopwords elimination) and utilized Google Translator APIs for cross-lingual dataset translations.
- Achieved optimal model performance with IndoBERT yielding a peak accuracy of 0.8862 in the translated combined dataset scenario.

Redesign UI JKT48 Official Website | Personal Project : [View Project](#)

- Analyzed usability flaws on the current official website to restructure the layout into a modern, visually striking, and clean user experience.
- Designed interactive, high-fidelity web screen prototypes using Figma, featuring dynamic carousel controls, structured schedule/news blocks, and intuitive navigation loops.
- Created a cohesive design system utilizing JKT48's signature color scheme, polished typography hierarchy, and standardized components to enhance fan engagement.

IT-Ticketing tool | Personal Project : [View Project](#)

- Designed and developed a full-stack, automated IT helpdesk ticketing system integrated with the Gemini API to automate issue categorization and urgency scoring.
- Engineered a lightweight, persistent backend utilizing Node.js, Express.js, and SQLite to handle RESTful API endpoints and maintain secure local database persistence.
- Built an interactive, cyber-ops-themed dashboard using Tailwind CSS and JavaScript (Fetch API) to allow system administrators to track, process (// prcs), and resolve (// rslv) tickets seamlessly.
- Optimized system reliability by integrating secure local environment variable management (dotenv) and standardizing Git workflows for clean codebase scaling.

EDUCATION

Bachelor's Degree in Informatics

Expected Graduation: Sep 2026

Telkom University — Bandung, Indonesia | GPA: 3.01/4.00

- Studied various IT fields including web development, UI/UX design, database systems, OOP, cybersecurity, mobile development, and project management.
- Completed multiple collaborative and project-based assignments throughout academic coursework.
- **Final Thesis:** Deteksi Hoax Menggunakan Model Multilingual Transformers dan IndoBERT.
- Developed an NLP framework using IndoBERT, mBERT, and XLM-R to identify fake news across a 5-language dataset, achieving a peak validation accuracy of 88.62%.

CERTIFICATIONS

- [Scientific Computing with Python – freeCodeCamp | 2025](#)
- [Responsive Web Design – freeCodeCamp | 2024](#)
- [Badminton Pose Time Series Classification using LSTM \(Participant\) – Telkom University | 2025](#)
- [Basic Management Proyek - DiCoding | 2026](#)

SKILLS

- **Languages:** [English – Intermediate / Working Proficiency \(EPrT Score: 463\)](#).
- **Technical Skills:** IT Helpdesk & Troubleshooting (Hardware/Software/Windows OS), Basic Networking (TCP/IP, LAN/Wi-Fi, VLAN), Microsoft 365, User Management (Active Directory concepts), Data Backup & Recovery, UI/UX Design (Figma).
- **Soft Skills:** Problem Solving, Teamwork, Communication, Fast Learning, Adaptability, Time Management, High logical thinking, Quick analytical skills
